PULL TYPE SWATH ROLLER

Why Use a Swath Roller?

Just a little wind can do a lot of damage to your crop. By using our corrosion proof polyethylene Swath Roller, you can minimize the damage. The roller flattens the swath, giving it a well-rounded shape. The tapered ends of the drum press the sides of the swath firmly into the stubble, so wind cannot get underneath. The even swath will also make for fast and easy combining.
