

## Powergrab™ XL

FOR GRABBING OF SILAGE AND OTHER MATERIALS COMBINED WITH SCOPING

For the grabbing and handling of Silage fodder for use with 3 – 5 tons lift capacity loaders. Powergrab XL comes standard with a bolt on cutting edge. The gables have reinforcements that strengthens the attachment of the cutting edge. The internal of the bucket contains a rounded back insert. This creates a sealed hollow section in the rear of the bucket improving torsional stiffness whilst improving the shape for easy ejection of material. The back features a rail system that makes it easy to assemble the hook type required.
